

ANALOG SENSOR CONTROLLERS:

Sensor Solutions offers a wall mountable Analog Sensor Output controller that displays the sensor output, and can be programmed to open or close a relay when the output is in a specific range. This unit also contains an auto-zero feature that can be operated by a proximity sensor to reset the output between cycles. This auto-zero feature is useful in applications where the output may drift over time due to changing temperatures or target positions. [Contact us](#) to discuss how this meter can be applied to your application or options for integrated auto zero sensors, different connection options or to discuss complete application solutions.
