

DIGITAL SENSOR ALARM:

Sensor Solutions offers a hand-held, battery powered alarm that can be paired with sensors to detect for the presence of ferrous material or magnets (dependent on the sensor type). The built in cable mates directly to Sensor Solutions sensors with CB1 or CB2 connectors. When the sensor output is triggered, an LED lights on the unit and the speaker emits an audible beep. [Contact us](#) to discuss audible or visual indication only options or for a wall mountable option.
